

## Oracle Database 12c: Performance Management and Tuning

**Duration:** 5 Days

### What you will learn

In the Oracle Database 12c: Performance Management and Tuning course, learn about the performance analysis and tuning tasks expected of a DBA: proactive management through built-in performance analysis features and tools, diagnosis and tuning of the Oracle Database instance components, and diagnosis and tuning of SQL-related performance issues.

### Learn To:

Use the Oracle tuning methodology.

Use Oracle-supplied tools for monitoring and diagnosing SQL and instance performance issues.

Use database advisors to proactively correct performance problems.

Identify and tune problem SQL statements.

Monitor instance performance by using Enterprise Manager.

Tune instance components.

### Benefits To You:

The DBA will analyze the SQL performance with available tools. The DBA will be introduced to various methods of identifying the SQL statements that require tuning and the diagnostic tools used to find ways to improve performance. This will include the use of statistics, profiles to influence the optimizer, and using the SQL Advisors.

### Maintain SQL Performance

A major task of DBAs is to maintain SQL performance across changes. This course introduces Database Replay and SQL Performance Analyzer which help the DBA test and minimize the impact of change.

### Influence Instance Behavior

Instance tuning uses the same general method of observing a problem, diagnosing the problem, and implementing a solution. The instance tuning lessons cover the details of major tunable components and describe how you can influence the instance behavior. For each lesson, we will examine the relevant components of the architecture. The course only discusses the architecture to the level required to understand the symptoms and solutions. More detailed explanations are left to other courses, reference material, and the Oracle documentation.

### Audience

Data Warehouse Administrator

Database Administrators

### Related Training

#### *Suggested Prerequisites*

Oracle Database 12c: Install and Upgrade Workshop

## Course Objectives

Use the Oracle Database tuning methodology appropriate to the available tools

Utilize database advisors to proactively tune an Oracle Database Instance

Use the tools based on the Automatic Workload Repository to tune the database

Diagnose and tune common SQL related performance problems

Diagnose and tune common Instance related performance problems

Use Enterprise Manager performance-related pages to monitor an Oracle Database

## Course Topics

### Introduction

Course Objectives

Course Organization

Course Agenda

Topics Not Included in the Course

Who Tunes?

What Does the DBA Tune?

How to Tune

Tuning Methodology

### Basic Tuning Diagnostics

Performance Tuning Diagnostics

Performance Tuning Tools

Tuning Objectives

Top Timed Events

DB Time

CPU and Wait Time Tuning Dimensions

Time Model

Dynamic Performance Views

### Using Automatic Workload Repository

Automatic Workload Repository Overview

Automatic Workload Repository Data

Enterprise Manager Cloud Control and AWR

Snapshots

Reports

Compare Periods

### Defining the Scope of Performance Issues

Defining the Problem

Limiting the Scope

Setting the Priority

Top SQL Reports

Common Tuning Problems

Tuning During the Life Cycle

ADDM Tuning Session  
Performance Versus Business Requirements

### **Using Metrics and Alerts**

Metrics and Alerts Overview  
Limitation of Base Statistics  
Benefits of Metrics  
Viewing Metric History Information  
Viewing Histograms  
Server-Generated Alerts  
Setting Thresholds  
Metrics and Alerts Views

### **Using Baselines**

Comparative Performance Analysis with AWR Baselines  
Automatic Workload Repository Baselines  
Moving Window Baseline  
Baselines in Performance Page Settings  
Baseline Templates  
AWR Baselines  
Creating AWR Baselines  
Managing Baselines with PL/SQL

### **Using AWR-Based Tools**

Automatic Maintenance Tasks  
ADDM Performance Monitoring  
Using Compare Periods ADDM  
Active Session History  
New or Enhanced Automatic Workload Repository Views  
Emergency Monitoring  
Real-time ADDM

### **Real-Time Database Operation Monitoring**

Overview  
Use Cases  
Defining a Database Operation  
Scope of a Composite Database Operation  
Database Operation Concepts  
Identifying a Database Operation  
Enabling Monitoring of Database Operations  
Identifying, Starting, and Completing a Database Operation

### **Monitoring Applications**

What is a Service?  
Service Attributes  
Service Types  
Creating Services  
Managing Services in a Single-Instance Environment  
Where are Services Used?  
Using Services with Client Applications  
Services and Pluggable Databases

## **Identifying Problem SQL Statements**

- SQL Statement Processing Phases
- Role of the Oracle Optimizer
- Identifying Bad SQL
- Top SQL Reports
- SQL Monitoring
- What is an Execution Plan?
- Methods for Viewing Execution Plans
- Uses of Execution Plans

## **Influencing the Optimizer**

- Functions of the Query Optimizer
- Selectivity
- Cardinality and Cost
- Changing Optimizer Behavior
- Optimizer Statistics
- Extended Statistics
- Controlling the Behavior of the Optimizer with Parameters
- Enabling Query Optimizer Features

## **Reducing the Cost of SQL Operations**

- Reducing the Cost
- Index Maintenance
- SQL Access Advisor
- Table Maintenance for Performance
- Table Reorganization Methods
- Space Management
- Extent Management
- Data Storage

## **Using SQL Performance Analyzer**

- Real Application Testing: Overview
- Real Application Testing: Use Cases
- SQL Performance Analyzer: Process
- Capturing the SQL Workload
- Creating a SQL Performance Analyzer Task
- SQL Performance Analyzer: Tasks
- Parameter Change
- SQL Performance Analyzer Task Page

## **SQL Performance Management**

- Maintaining SQL Performance
- Maintaining Optimizer Statistics
- Automated Maintenance Tasks
- Statistic Gathering Options
- Setting Statistic Preferences
- Restore Statistics
- Deferred Statistics Publishing
- Automatic SQL Tuning

## **Using Database Replay**

- Using Database Replay

- The Big Picture
- System Architecture
- Capture Considerations
- Replay Considerations: Preparation
- Replay Considerations
- Replay Options
- Replay Analysis

### **Tuning the Shared Pool**

- Shared Pool Architecture
- Shared Pool Operation
- The Library Cache
- Latch and Mutex
- Diagnostic Tools for Tuning the Shared Pool
- Avoiding Hard Parses
- Reducing the Cost of Soft Parses
- Sizing the Shared Pool

### **Tuning the Buffer Cache**

- Oracle Database Architecture: Buffer Cache
- Buffer Cache: Highlights
- Database Buffers
- Buffer Hash Table for Lookups
- Working Sets
- Buffer Cache Tuning Goals and Techniques
- Buffer Cache Performance Symptoms
- Buffer Cache Performance Solutions

### **Tuning PGA and Temporary Space**

- SQL Memory Usage
- Performance Impact
- Automatic PGA Memory
- SQL Memory Manager
- Configuring Automatic PGA Memory
- Setting PGA\_AGGREGATE\_TARGET Initially
- Limiting the size of the Program Global Area (PGA)
- SQL Memory Usage

### **Automatic Memory**

- Oracle Database Architecture
- Dynamic SGA
- Granule
- Memory Advisories
- Manually Adding Granules to Components
- Increasing the Size of an SGA Component
- Automatic Shared Memory Management: Overview
- SGA Sizing Parameters: Overview

### **Performance Tuning Summary with Waits**

- Commonly Observed Wait Events
- Additional Statistics
- Top 10 Mistakes Found in Customer Systems

## Symptoms
